Experience

Web Developer // Graphiti Associates // Seattle WA

July 2017 - Current

Development

- Experience building responsive front-end websites and web applications using Wordpress, React, and HTML/SASS/JavaScript/jQuery.
- Development and maintenance of Wordpress sites with custom themes and experienced with Advanced Custom Fields & Custom Post Types plugins.
- Landing Page development for Amazon product launches with integration into the Salesforce Pardot CRM.
- Experience building web pages with Amazon's LEGO CMS.
- Collaboration with designers to determine project feasibility and efficiency.
- Completely customized and fully responsive HTML email development with experience using Litmus and Email On Acid for testing compatibility with all major email clients.
- Cross-browser testing experience including development and support for IE 11.
- SVG Animations using CSS or JavaScript for more complexity.

General

- Compile quarterly QA/maintenance reports for clients.
- Ability to extract project assets from Photoshop, Illustrator, and XD design files.
- Knowledge of image optimization techniques to reduce site load.
- Occasional creative headline copywriting.

Front End Web Developer // Garrigan Lyman Group // Seattle WA

March 2017 - July 2017

Development

- Built landing pages and assisted with building site redesigns for various clients, including T-Mobile, Eddie Bauer, and EVIVA, using HTML, SCSS, and Javascript.
- Created responsive HTML emails.

- Completed daily maintenance requests for several T-Mobile subdomains and made small updates using C# along with the Umbraco framework.

General

- Provided after-hours development support for short-notice requests as well as late night/early morning launches
- Managed code repositories using TortoiseSVN & Git.
- Worked with project managers, designers, and QA for timely project delivery.
- Used Photoshop to slice assets needed for projects.

Full-stack Web Development Fellow // Galvanize // Seattle WA

May 2016 - Oct 2016

Graduate of Galvanize's 6-month immersive Full-Stack Web Development Program. The following is a select list of projects I worked on and technologies I worked with during that time

VOQUE

A responsive web app that brings karaoke into the 21st century by solving the problem of inefficiency in your average karaoke request system.

- ReactJS on the front end styled using SCSS.
- Uses Musixmatch API with Axios HTTP client to pull in lyrics for requested songs.
- Uses Multer to handle file uploads
- Node.js on the back end with an Express server and PostgreSQL database.

Smokator

A ReactJS mobile web app that seeks to improve the process of acquiring cigarettes from strangers at a bar.

- SCSS & React-friendly Material-UI front-end.
- Uses an Express server and a PostgreSQL database.
- Uses socket.io to connect multiple users allowing dynamic and interactive chats.
- Users select bars in their immediate area using JavaScript's geolocation services along with AJAX and the Google Places API.

Data Classification Analyst // G2 Web Services // Bellevue WA

Oct 2011 - May 2016

Duties

- Assessed thousands of merchant websites for high risk content and compiled detailed monthly reports for 30+ clients.
- Stayed up to date with dynamic work guidelines and policies
- Consistently maintained QA goals of 97%
